The Duplication Matrix

Ivan Jacob Agaloos Pesigan

The duplication matrix D_k is the $k^2 \times \frac{1}{2} k \, (k+1)$ matrix for a given $k \times k$ symmetric matrix A where

$$D_k \operatorname{vech}(A) = \operatorname{vec}(A) \quad (A = A')$$
 (1)

 $\text{vec}\left(\cdot\right)$ is the vectorization of a matrix, and $\text{vech}\left(\cdot\right)$ is the half-vectorization of a matrix.

Examples

```
library(linearAlgebra)
```

```
A <- matrix(
  data = c(
    1.0, 0.5, 0.4,
    0.5, 1.0, 0.6,
    0.4, 0.6, 1.0
  ),
  ncol = 3
)
k <- dim(A)[1]</pre>
```

```
dcap(k)
     [,1] [,2] [,3] [,4] [,5] [,6]
##
## [1,] 1 0
           0
               0
                  0
## [2,] 0
        1
              0
            0
                  0
                     0
                 0
## [3,] 0 0
           1 0
                     0
## [4,] 0 1 0 0
                     0
## [5,] 0 0 0 1 0
                     0
## [6,] 0 0 0 1
                     0
## [7,] 0 0 1 0 0
                     0
## [8,] 0 0 0 1
                     0
            0 0
## [9,] 0 0
```

```
dcap(k) %*% vech(A)

## [,1]

## [1,] 1.0

## [2,] 0.5

## [3,] 0.4

## [4,] 0.5

## [5,] 1.0

## [6,] 0.6

## [7,] 0.4

## [8,] 0.6

## [9,] 1.0
```

```
all.equal(
  c(dcap(k) %*% vech(A)),
  vec(A)
)
## [1] TRUE
```
